

Infor OS, your future-proof operating service

Be ready—for today, tomorrow, and whatever comes next

Infor OS is technology that powers your entire enterprise, bringing together collaboration, artificial intelligence, analytics, integration, mobility, and document management in a single platform. Providing a unified experience across Infor's products, it makes enterprise systems—both Infor and non-Infor—work seamlessly together. The foundation of Infor's broad, deep, and industry-focused solution portfolio, Infor OS delivers the flexibility and innovation you need to take advantage of opportunities today and be ready for whatever might come next.

Infor OS gives you unparalleled capabilities for integrating and extending the applications that make your business successful. Robust integration, customizable homepages, and unmatched analytical capabilities make it easier for you to tailor and expand your technology infrastructure to meet your specific needs, while a consumer-inspired user experience makes applications feel instantly familiar. Infor OS also provides single sign-on and a unified, mobile-first user interface across Infor's applications.

- Infor OS is your foundation for a connected, intelligent network.

Infor OS serves as the underlying foundation for your entire enterprise ecosystem, ensuring that systems work seamlessly together, deliver business insights automatically, and have the flexibility to support changing business and industry needs. Core features of Infor OS include:

- **Collaboration**—Get an intelligent portal to your application suite with Infor OS, which establishes a common workflow and organizes conversations into enterprise-wide streams where employees can collaborate in real time. By marrying business processes to employee communications, Infor OS allows you to contextualize intelligence, make single sign-on a reality, and increase efficiency.
- **Extensibility**—Rapidly develop robust enterprise capabilities based on your needs with the extensibility capabilities of Infor OS. Whether you need an intuitive consumer-grade web interface or a high-productivity form, Infor OS can help create the right experience with minimal coding, via desktop, tablet, or smartphone.
- **Process integration**—Easily integrate both Infor and third-party software applications with Infor OS's purpose-built middleware solution. By providing a simple but powerful and scalable framework, Infor OS allows you to eliminate operational silos, improve exception management, and achieve unparalleled end-to-end efficiency.
- **Business intelligence**—Get pertinent, pre-built industry analytics content that works across enterprise systems and makes pivotal information easily accessible and actionable. Infor OS leverages cloud-native BI, analytics, and data visualization capabilities that draw on data from across your enterprise, providing a broad choice of modern, machine learning-infused, self-service analytics interfaces.
- **Artificial intelligence**—The artificial intelligence (AI) capabilities of Infor OS are designed to maximize human potential by reducing the burden of repetitive administrative tasks and giving employees more time to do work that matters. Accessible via voice or chat, the platform's AI automates processes and delivers insights both on-demand and proactively based on continual analysis and machine learning.
- **Commerce networks**—More than 80% of the data companies need to run their businesses resides outside their own four walls. Infor OS leverages GT Nexus to provide a cloud-based collaboration platform that automates processes on a global scale, across entire trade communities. The result is visibility across the supply chain and the ability to drive new levels of operational efficiency and business agility.
- **Data**—Easy access to real-time data from across your enterprise systems becomes a reality with Infor OS. All your data sources are wired together, with information from various sources aggregated into a data lake that makes analytics accessible across your organization. Fast, reliable, and refreshable at the click of a mouse or tap of the screen, your data is visualized in real-time, giving users the ability to make better decisions faster.
- **Cloud and industry CloudSuites**—Infor OS's cloud-based delivery makes systems flexible, cost-effective, and forever modern. Serving as the foundation for Infor CloudSuite™ industry suites, which provide the last-mile functionality organizations need without costly and limiting customizations, Infor OS gives you a technology platform capable of handling today, tomorrow, and whatever comes next.

The future of the future

Building on a foundation established around collaboration, mobility, extensibility, and integration, Infor OS offers new capabilities that turn technology into a competitive advantage—and reinvent how you relate to your workforce, suppliers, customers, assets, and processes.

Benefits:

- Seamless integration between enterprise systems
- Customizable workspaces
- Automatic delivery of information and alerts based on roles or priorities
- Real-time, organization wide visibility
- Automation of tasks via voice and chat commands
- End-to-end supply chain visibility
- Consistent, consumer-inspired user experience
- Robust extensibility
